## PRODUCT SELECTION GUIDE

### STEP 1

Select the fluid temperature range and seal material from the general table on page 1. Select basic catalogue number, including pipe thread identification letter. Refer to the specifications table on pages 1 and 2.

**Example : G551A001**

### STEP 2

Select prefix (combination). Select the appropriate operator from the specifications table on page 1 and the prefix table on page 2. Select for this operator in the electrical characteristics table on page 3: the power level (RP, MP, BP), the type of electrical enclosure protection and the desired temperature class. The air operated version is without prefix.

**Warning:** The ambient temperature range of your application may not exceed the temperature range of your operator.

Do not use prefixes for air operated versions.

**Example : SC**

### STEP 3

Select suffix (combination) if required. Suffix GD only applies for the air operated versions, do not use suffix MS.

**Example : MS**

### STEP 4

Select voltage. Refer to standard voltages on page 3.

**Example : 230V / 50Hz**

### STEP 5

Final catalogue / ordering number.

**Example :**

**SC G551A001MS 230 V / 50 Hz**

**EXPLANATION OF TEMPERATURE RANGES OF SOLENOID VALVES**

Valve temperature range                      The valve temperature range (TS) is determined by the selected seal material, the temperature range for proper operation of the valve and sometimes by the fluid (e.g. steam)

Operator ambient temperature range        The operator ambient temperature range is determined by the selected power level and the safety code

Total temperature range                      The temperature range of the complete solenoid valve is determined by the limitations of both temperature ranges above
