A Servo Motor for Every Application

Reliability and Innovation

Emerson Industrial Automation designs its Control Techniques products using a proven development process that prioritizes innovation and reliability. This process has resulted in Emerson's market-leading reputation for performance and quality.

Emerson Industrial Automation offers a wide range of reliable servo motors designed to meet specific application requirements. When matched to a Control Techniques' brand servo drive product (Unidrive M, Digitax ST, Epsilon EP or MDS Servo drive), the resulting drive/motor combination provides an optimized system in terms of ratings, performance, cost and ease of use.

Today, businesses of all sizes are searching for partners who understand the unique demands of today's global economy. Time and again they turn to Emerson Industrial Automation. With our world-class brands, broad industry experience and extensive global presence, Emerson Industrial Automation is uniquely positioned to deliver cost-effective solutions for the ever-changing industrial manufacturing market.

Performance Advantage

Unimotor fm

Designed for flexible configuration for use in a wide range of applications. A high inertia option is available.

- **Voltage Rating:** 230 V/460 V
- **Continuous Torque:** 10.6 to 1204 lb-in (1.2 to 136 Nm)
- **Multiple Feedback Choices:** Resolver, incremental and absolute encoder with multiple connector options
- **Frame Sizes (with NEMA flange options):** 75, 95, 115, 142, 190 and 250 mm
- **Ratings:** IP65; UL, CE and RoHS

Unimotor hd

Compact low-inertia servo motor for high-dynamic applications

- **Voltage Rating:** 230 V/460 V
- **Continuous Torque:** 6.4 to 752 lb-in (0.72 to 85.0 Nm)
- **Multiple Feedback Choices:** Resolver, encoder and absolute encoder
- **Frame Sizes:** 55, 67, 89, 115, 142 and 190 mm
- **Ratings:** IP65; UL, CE and RoHS

NT Motor

Compact NEMA or metric flange motors

- **Voltage Rating:** 230 V
- **Continuous Torque:** 7.5 to 56 lb-in (0.85 to 6.3 Nm)
- **Multiple Feedback Choices:** Incremental encoder
- **Flying Lead Option**
- **Frame Sizes:** English (NEMA 23 or 34) or Metric (IEC-72-1)
- **Ratings:** IP65; UL and RoHS

XV Motor

Economical metric motors

- **Voltage Rating:** 230 V
- **Continuous Torque:** 0.9 to 101 lb-in (0.11 to 11.5 Nm)
- **Frame Sizes:** 40, 60, 80 and 130 mm
- **Ratings:** IP55 and IP65; UL, CE and RoHS

Why Motion Customers Choose Emerson's Motion Control Solutions...

- A full line of servo motors up to 1200 lb-in
- Single-source motion control lowers total system costs
- FREE software offers the ultimate programming capability and greatly reduces programming time
- Multiple fieldbus options including EtherCAT, EtherNet I/P, Modbus TCP/IP and more
- High-speed, peer-to-peer communications
- 8 feedback types supported as standard
- Integrated programs eliminate need for PLC
- Drive and Automation Center support
- Zero-space internal EMI and dynamic braking resistor options
- AC drives with closed-loop vector control and sensorless rotor control

Selecting the Right Motor for the Right Drive

Emerson Industrial Automation drive-and-motor combinations provide an optimized system in terms of ratings, performance, cost and ease of use. You can manually select the system components using the following steps, or download the SERVOSoft® sizing software which includes our Control Techniques' brand of servo drive and motor data.

1. Determine the application's continuous and peak torque requirements at various motor shaft speeds, then refer to motor data tables and the visual reference overview to help determine which motor family will be most appropriate for the application.
2. Once the motor family is selected, use this brochure to select a specific motor model that delivers the required torque and speed. Make note of the continuous and peak current (Amps) requirements of the selected motor.
3. Check the specification tables in the Control Techniques' brand individual drive brochures for Digitax ST, Epsilon EP, Unidrive M or MDS servo drives to select the drive model that delivers adequate continuous and peak torque for the selected motor.
4. Refer to the Servo Motor Cables section of this brochure to select the motor power and feedback cables for the selected motor and drive.
5. Confirm that the ratio of rotor inertia to load inertia is <10:1

$$\text{load inertia/rotor inertia} < 10$$

Note: A gear reducer will reduce the load inertia based on the following equation:

$$\text{Reflected load inertia} = \text{load inertia/gear ratio}^2$$

Note: When specifying a motor system, be sure to consider such options as user-interfaces (HMI), braking resistors and other options and accessories that will enhance the system's performance and value.

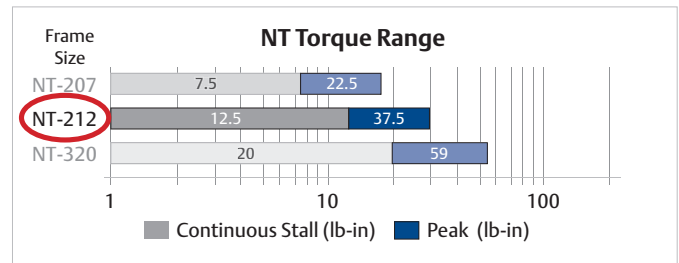

Electronic Nameplates

Some motors fitted with high-resolution SinCos or absolute encoders are pre-loaded with the motor "electronic nameplate" data during the manufacturing process. This data can be read by most Control Techniques' brand servo drives and used to automatically optimize the drive settings. This feature simplifies commissioning and maintenance, ensures consistent performance and saves time.

Example

using the NT motor family and Digitax ST servo drive family

Step 1: The application requires 12 lb-in continuous torque.

Step 2: The Servo Motors brochure lists the NT-212 motor with 2.7 A stall current.

Motor Frame Size (in)	2	230	
Voltage (Vrms)	230	230	
Model	NT-207	NT-212	
Continuous Stall Torque (lb-in)	7.5	12.5	
Continuous Stall Torque (Nm)	0.85	1.4	
Peak Torque (lb-in)	22.5	37.5	
Peak Torque (Nm)	2.54	4.24	
Inertia (lb-in-sec ²)	0.000094	0.000164	
Inertia (kgm ²)	0.0000106	0.0000185	
Motor Weight (lb)	3	4	
Motor Weight (kg)	1.36	1.81	
Maximum Cogging (lb-in)	0.094	0.12	
Maximum Cogging (Nm)	0.011	0.014	
5000 rpm	Kt (lb-in/A) =	5.12	5.08
	Kt (Nm/A) =	0.58	0.57
	Ke (V/k rpm) =	35	34.7
Rated Torque (lb-in)	7.50	12.50	
Rated Torque (Nm)	0.85	1.4	
Stall Current (A)	1.7	2.7	
Rated Power (kW)	0.432	0.740	
R (ph-ph) (Ohms)	11.1	4.56	
L (ph-ph) (mH)	39.1	18.9	

Step 3: Select the Digitax ST drive with adequate current rating.

Ratings — Digitax ST

Drive Model Number	Voltage / Ø	Output Current*	
		Cont. A	Peak A
DST1201	200-230 3Ø	1.7	5.1
DST1202	200-230 3Ø	3.8	11.4
DST1203	200-230 3Ø	5.4	16.2
DST1204	200-230 3Ø	7.6	22.8
DST1401	380-480 3Ø	1.5	4.5

Drive switching frequency at 6 kHz for rated performance

*Peak current is duty cycle limited

**Derate continuous current above 6 kHz drive switching frequency

Unidrive M, Digitax ST, Epsilon EP, MDS

Unimotor fm 230 V / 460 V

UNIMOTOR FM

Flexible Configuration AC Servo Motors

Unimotor fm is a high performance, brushless AC Servo motor range matched for use with Control Techniques' brand drives. "FM" stands for "Flexible Motor" and is designed to accommodate a wide range of applications. The motors are available in six frame sizes with various mounting arrangements and motor lengths. Emerson drives and motors are designed to function as an optimized system. Unimotor fm is the perfect partner for Unidrive M, Digitax ST and Epsilon EP servo drives.

Key Features

- Torque range: 12.4 to 1204 lb-in (1.4 to 136.0 Nm)
- Medium inertia design with high inertia option available
- Connector styles include vertical, low profile and 90° rotatable
- Variety of flange possibilities (IEC/NEMA)
- Holding brake option
- IP65 conformance
- Winding to suit 230 V and 460 V
- Speed options include 2000, 3000, 4000 and 6000 rpm
- Multiple feedback options:
 - Resolver: Robust for extreme applications and conditions — lower accuracy, medium resolution
 - Incremental encoder: High accuracy, medium resolution
 - Absolute: Medium accuracy, medium resolution, single-turn and multi-turns
 - SinCos/Absolute: High accuracy, high resolution, single-turn and multi-turn
 - HIPERFACE (SICK) and EnDat (Heidenhain) protocols supported

Unimotor

NOW WITH EVEN HIGHER PERFORMANCE!

Unimotor fm Torque Range

Electronic Nameplate Capability

When a Unidrive M, Unidrive SP or Digitax ST servo drive is connected to a SinCos or absolute encoder, it can recognize and communicate with the motor to obtain the "electronic nameplate" data. This motor data can then be used to automatically optimize the drive settings. This feature simplifies commissioning and maintenance, ensures consistent performance and saves time.

Unimotor fm Order Information

Use the information below to create an order code for a Unimotor fm (top row is an example).

*Add (-SREL) to end of E3/U3 order string for 80 mm length shafts on 190 mm frames.

Notes:

*Half key is used to balance shaft. It does not complete shaft radius

a 6000 rpm not available on all frames sizes

190 – Lifting eyelets will be fitted on all 190 motors. This is to enable easy handling of these motors that are often over 55 lbs in weight. If there is an issue with the lifting eyes causing an obstruction when mounting the mating cables then the lifting eyelets may be removed once the motor is installed.

Hybrid Box Connection “H” – Due to the increased power ratings now available on the E3/U3 motors a hybrid box is now the standard power connection type on some 115 and 190 frames.

142 Power Connector Rating - Due to the increased power ratings now available of the E3/U3 motors power connector type “J” or “M” (Size 1.5 power connector) is now the standard on some 142 frames.

NOTES:

- Δt = 212 °F (100 °C) winding 104 °F (40 °C) maximum ambient
- All data subject to ±10% tolerance
- Stall torque, rated torque and power relate to maximum continuous operation tested in a 68 °F (20 °C) ambient at 12 kHz drive switching frequency
- Emerson has an ongoing process of development and reserves the right to change the specification without notice
- All other figures relate to a 68 °F (20 °C) motor temperature; maximum intermittent winding temperature is 284 °F (140 °C)

NOTES:

- * Ratings shown require connector option "J", "M", "N" size 1.5 power connector.
- Δt = 212 °F (100 °C) winding 104 °F (40 °C) maximum ambient
- All data subject to ±10% tolerance
- Stall torque, rated torque and power relate to maximum continuous operation tested in a 68 °F (20 °C) ambient at 12 kHz drive switching frequency
- Emerson has an ongoing process of development and reserves the right to change the specification without notice
- All other figures relate to a 68 °F (20 °C) motor temperature; maximum intermittent winding temperature is 284 °F (140 °C)

†Order Code Information for 230/460 V 190 mm Frame

The Unimotor E3/U3 190 frame models are now supplied with an 58 mm long output shaft. If replacing an existing Unimotor fm 190 E2/U2 model which has a standard 80 mm long output shaft add the suffix -SREM to the order code.

80mm long output shaft order code example:		shaft length	shaft diameter	notes
Unimotor fm E3/U3	190U3D300BACAA215320	58 mm	32 mm	New standard offering
Unimotor fm E2/U2 (replacement)	190U3D300JACAA215320-SREM	80 mm	32 mm	Previous standard offering

NOTES:

- $\Delta t = 212\text{ }^{\circ}\text{F}$ ($100\text{ }^{\circ}\text{C}$) winding $104\text{ }^{\circ}\text{F}$ ($40\text{ }^{\circ}\text{C}$) maximum ambient
- All data subject to $\pm 10\%$ tolerance
- Stall torque, rated torque and power relate to maximum continuous operation tested in a $68\text{ }^{\circ}\text{F}$ ($20\text{ }^{\circ}\text{C}$) ambient at 12 kHz drive switching frequency
- Emerson has an ongoing process of development and reserves the right to change the specification without notice
- All other figures relate to a $68\text{ }^{\circ}\text{F}$ ($20\text{ }^{\circ}\text{C}$) motor temperature; maximum intermittent winding temperature is $284\text{ }^{\circ}\text{F}$ ($140\text{ }^{\circ}\text{C}$)

Unimotor fm Motor Selection Considerations

Feedback

Feedback Device Order Code	Feedback Type	Encoder Supply Voltage	SinCos Cycles or Incremental Pulses per Revolution	Resolution Available to Position Loop	Feedback Accuracy
075-250 motors					
AE	Resolver ¹	6 Vrms Excitation 6 kHz	1	Medium 16384 (14 bit)	Medium +/- 720 arc second
CA	Incremental Encoder	5 Vdc	4096	Medium 16384 (14 bit)	High +/- 60 arc second
EC (Multi-turn) FC (Single-turn)	Inductive Absolute Encoder EnDat ²	5 Vdc	32	High 524288 (19 bits)	Medium +/- 280 arc second
RA (Multi-turn) SA (Single-turn)	Optical SinCos Encoder HIPERFACE ²	7 - 12 Vdc	1024	Very high 1.04 x 10 ⁶ (20 bits)	High +/-52 arc second
EB (Multi-turn) FB (Single-turn)	Optical Absolute Encoder EnDat ²	3.6 - 14 Vdc	2048	Very High 2.08 x 10 ⁶ (21 bits)	Very High +/-20 arc second (Differential non linearity +/- 1% signal period)

NOTES:

¹Resolution value shown when used with the Unidrive M resolver input or SM-Resolver Option Module (Unidrive Sp and Digitax ST)

²Resolution value shown when used with the Unidrive M, Unidrive SP or Digitax ST when the encoder type is set to either SC EnDat or SC Hiper, depending on the encoder. Multi-turn devices have 4096 (12 bit) resolution.

Motor Selection Considerations

Motor Selection

Motor Derating

Any adverse operating conditions require that the motor performance be derated. These conditions include ambient temperature above 104 °F (40 °C), motor mounting position, drive switching frequency or a drive oversized for the motor.

Ambient Temperatures

For ambient temperatures above 104 °F (40 °C), the torque must be derated using the following formula as a guideline (only applies to motors up to 3000 rpm and assumes copper losses dominate).

$$\text{New derated torque} = \text{Specified torque} \times \sqrt{1 - \frac{(\text{ambient temperature}^* - 40)}{100}}$$

*Measured in °C

For example, with an ambient temperature of 169 °F (76 °C), the new derated torque will be 0.8 x specified torque.

Drive Switching Frequency

Most drive current ratings are reduced at higher switching frequencies. See individual drive manuals for details.

Most motor current ratings are reduced at lower switching frequencies. See the table below for motor derating factors (these figures are for guidance only).

Ingress Protection

IP65 conformance; sealed against water spray and dust when mounted and connected.

Unimotor fm Motor Derating Factors

Switching Frequency	Frame Length								
	075		095		115		142		190
	A-D	A-E	A-C	D-E	A-C	D-E	A-B	C-H	D-F

Unimotor fm Motor Holding Brake Specifications

Motor Frame Size	Power Supply	Input Power	Static Torque		Mechanical Release Time	Added Inertia		Added Weight		Degress
(mm)	(Vdc)	(W)	(lb-in)	(Nm)	(ms)	(lb-in-sec ²)	(kgcm ²)	(lb)	(kg)	(°)
75	24	6.3	19.5	2.2	22	0.00006	0.07	1.1	0.5	1.03
95	24	16	108	12.2	60	0.00035	0.39	1.3	0.6	0.94
115	24	23	177	20	120	0.00039	0.24	2.6	1.2	0.75
142	24	23	177	20	120	0.00048	0.3	3.7	1.7	0.75
190 (A-D)	24	25	221	42	95	0.00035	0.39	4.4	2.0	0.77
190 (E-H)	24	25	548	67	120	0.00035	0.39	4.4	2.0	0.77
250	24	62	1195	135	250	0.01452	16.4	24.2	11.0	0.5

NOTES:

- Figures shown in individual motor sections are at 68 °F (20 °C) ambient
- Apply a derate factor of 0.7 to standard brake torque figures if motor temperature is above 212 °F (100 °C)
- *Backlash will increase over time

Thermal Protection

Thermistor protection to 293 °F (145 °C) is built into the motor windings and gives an indication of serious overheating problems.

The installer must connect the thermistor to the drive. Failure to do so will invalidate the motor warranty if winding burns out.

Environmental Conditions

Any liquids or gases that may come into contact with the motor must be confirmed to ensure compliance with the correct international standards.

Brake Operation

Do not apply the brake while the motor shaft is rotating. The brake can only take a limited number of emergency braking operations and must not be used for repeated dynamic braking.

Thermal Test Conditions

In general, motor torque should be derated if the motor mounting surface is heated from an external source such as a gearbox, the motor is connected to a poor thermal conductor, or the motor is mounted in a confined space with restricted air flow.

Thermal motor mounting arrangement test example:

Motor Type/ Frame	Aluminum Heatsink Plate	
	(in)	(mm)
075-095	9.8 x 9.8 x 0.6	250 x 250 x 15
115-142	13.8 x 13.8 x 0.8	350 x 350 x 20
190	19.7 x 19.7 x 0.8	500 x 500 x 20

Unimotor hd 230 V | 460 V

Compact, Powerful High Dynamic AC Servo Motors

Designed for maximum torque density, the Unimotor hd brushless AC Servo motor series provides an exceptionally compact, low inertia solution for applications that require very high torque during rapid acceleration and deceleration profiles. Unimotor hd motors fitted with high resolution SinCos or absolute encoders are pre-loaded with the motor “electronic nameplate” data during the manufacturing process. This data can be read by most Control Techniques' brand servo drives and used to automatically optimize the drive settings. This feature simplifies commissioning and maintenance, ensures consistent performance and saves time.

The Unimotor hd torque profile is closely matched to Digitax ST Servo drives providing up to 300% peak overload for maximum dynamic performance.

Key Features

- Torque range: 6.4 to 752 lb-in (0.72 to 85.0 Nm)
- High torque-to-inertia ratio for high-dynamic performance
- Compact and powerful
- Optional holding brake
- IP65 conformance
- Segmented stator design
- World class performance
- Winding to suit 230 V and 460 V
- Speeds include 2000, 3000, 4000 and 6000 rpm
- Large shafts to increase torsional rigidity
- Multiple feedback options:
 - Incremental encoder: High accuracy, medium resolution
 - Absolute: Medium accuracy, medium resolution, single-turn and multi-turn
 - SinCos/absolute: High accuracy, high resolution, single-turn and multi-turn
 - HIPERFACE (SICK) and EnDat (Heidenhain) protocols supported
 - Resolver: Robust for extreme applications and conditions; lower accuracy, medium resolution

Approvals

Unimotor hd

Unimotor hd motors (shown with a Digitax ST Servo drive).

Unimotor hd Torque Range

All Unimotor hd motors feature connections that rotate for easier cable routing and installation.

NOTES:

- Δt= 212 °F (100 °C) winding 104 °F (40 °C) maximum ambient; all data subject to +/-10% tolerance
- Stall torque, rated torque and power relate to maximum continuous operation tested in a 68 °F (20 °C) ambient above 12 kHz drive switching frequency
- Maximum intermittent winding temperature is 284 °F (140 °C)

Unimotor hd Selection Considerations

Feedback Options

Feedback Device Order Code	Feedback Type	Encoder Supply Voltage	SinCos Cycles or Incremental Pulses per Revolution	Resolution Available to Position Loop	Feedback Accuracy
055-067 Motors					
AR	Resolver ¹	7 Vrms	1	Medium	Low
		Excitation 5 kHz		16384 (14 bit)	+/- 600 arc second
CR	Incremental encoder	5 Vdc	4096	Medium	Medium
				16384 (14 bit)	+/- 150 arc second
EM (Multi-Turn) FM (Single-Turn)	Inductive Absolute encoder EnDat ²	5 Vdc	16	High	Medium
				2.62 x 10 ⁵ (18 bits)	+/- 480 arc second
089, 115, 142 and 190 Motors					
AE	Resolver ¹	6 Vrms	1	Medium	Medium
		Excitation 6 kHz		16384 (14 bit)	+/- 720 arc second
CA	Incremental encoder	5 Vdc	4096	Medium	High
				16384 (14 bit)	+/- 60 arc second
EC (Multi-Turn) FC (Single-Turn)	Inductive Absolute encoder EnDat ²	7 - 10 Vdc	32	Medium absolute position 524288 (19 bits)	Medium
				Very high	+/- 280 arc second
RA (Multi-Turn) SA (Single-Turn)	Optical SinCos encoder ² HIPERFACE	7 - 12 Vdc	1024	1.04 x 10 ⁶ (20 bits)	For SinCos integral non-linearity +/- 45 arc second For SinCos differential non-linearity +/- 7 arc second (total accuracy +/- 52 arc second)
				Very high	Very high
EB (Multi-Turn) FB (Single-Turn)	Optical Absolute encoder EnDat ²	3.6 - 14 Vdc	2048	Very high	Very high
				2.08 x 10 ⁶ (21 bits)	+/- 20 arc second (differential non-linearity +/- 1% signal period)

NOTES:

¹Resolution value shown when used with the Unidrive M resolver input or SM-Resolver Option Module (Unidrive Sp and Digitax ST)

²Resolution value shown when used with the Unidrive M, Unidrive SP or Digitax ST when the encoder type is set to either SC EnDat or SC Hiper, depending on the encoder - multi-turn devices have 4096 (12 bit) resolution

Motor Selection

Motor Derating

Adverse operating conditions require that the motor performance be derated. These conditions include ambient temperature above 104 °F (40 °C), motor mounting position, drive switching frequency or a drive oversized for the motor.

Ambient Temperatures

For ambient temperatures above 104 °F (40 °C), the torque must be derated using the following formula as a guideline for motors up to 3000 rpm. Consult factory for higher-speed motor derating information.

New derated torque =

$$\text{Specified torque} \times \sqrt{1 - \frac{[\text{ambient temperature}^* - 40]}{100}}$$

*Measured in °C

For example, with an ambient temperature of 169 °F (76 °C), the new derated torque will be 0.8 x specified torque.

Drive Switching Frequency

Most drive current ratings are reduced at higher switching frequencies. See individual drive manuals for details.

See the table below for motor derating factors (these figures are for guidance only).

Switching Frequency	Motor Type/Frame					
	055	067	089	115	142	190
3 kHz	0.92	0.93	0.89	0.89	0.83	0.90
4 kHz	0.93	0.94	0.91	0.92	0.85	0.95
5/6 kHz	0.95	0.95	0.95	0.96	0.88	1
8 kHz	0.96	0.98	0.97	0.98	0.91	1
10/12/16 kHz	1	1	1	1	1	1

Mounting Arrangements

In general, motor torque should be derated if the motor mounting surface is heated from an external source such as a gearbox, the motor is connected to a poor thermal conductor, or the motor is mounted in a confined space with restricted air flow.

Thermal Test Conditions

The performance data shown was recorded with an ambient temperature of 68 °F (20 °C) and the motor mounted on a thermally-isolated aluminum plate.

Motor Type/Frame	Aluminum Heatsink Plate	
	(in)	(mm)
055	4.3 x 4.3 x 1.06	110 x 110 x 27
067, 089	9.8 x 9.8 x 0.6	250 x 250 x 15
115 to 142	13.8 x 13.8 x 0.8	350 x 350 x 20
190	19.7 x 19.7 x 0.8	500 x 500 x 20

Thermal Protection

Thermistor protection to 293 °F (145 °C) is built into the motor windings and gives an indication of serious overheating problems. **The installer must connect the thermistor to the drive. Failure to do so will invalidate the motor warranty if winding burns out.**

Environmental Conditions

Any liquids or gases that may come into contact with the motor must be confirmed to ensure compliance with the correct international standards.

Brake Operation

Do not apply the brake while the motor shaft is rotating. The brake can only take a limited number of emergency braking operations and must not be used for repeated dynamic braking.

Ingress Protection

IP65 conformance; sealed against water spray and dust when mounted and connected.

Unimotor hd Holding Brake Specifications

Motor Frame Size (mm)	Power Supply (Vdc)	Power (W)	Static Torque		Release Time (ms) nom.	Added Inertia		Backlash Degrees*	Added Weight	
			(lb-in)	(Nm)		(lb-in-sec ²)	(kgcm ²)		(lbs)	(kg)
055	24	6.3	15.9	1.8	22	0.00003	0.03	0.73	0.88	0.4

190 C-D	24	25	592	67	120	0.00404	4.57	0.77	11.7	5.3
190 F	24	54.5	885	100	CF	0.00683	7.72	0.75	11.7	5.3

NOTES:

- Figures shown in individual motor sections are at 68 °F (20 °C) ambient
- Apply a derate factor of 0.7 to standard brake torque figures if motor temperature is above 212 °F (100 °C)
- *Backlash will increase over time

NT Motor 230 V

Compact NEMA or Metric Flange AC Servo Motors

The NT motor is a compact, high performance motor designed to maximize torque and minimize size. The NT motor uses powerful magnets and is manufactured with a segmented core to maximize stator efficiency.

NT motors are available with direct motor-to-drive connector terminations for Control Techniques' brand Unidrive M, Digitax ST and Epsilon EP servo drives – cable lengths up to 20 ft are available.

Key Features

- Torque range: 7.5 to 56 lb-in (0.85 to 6.3 Nm)
- Very low inertia for high acceleration and cycle rates
- English (NEMA 23 or 34) or Metric (IEC- 72-1) flanges
- Available with or without holding brakes
- Direct connect available – no additional cables required!
- Flying-lead cabling option (ex: NTE-320-LONS-0005) with improved ingress protection; flying leads are available with or without MS connectors
- IP65 conformance (IP67S and IP68S optional)
- Standard 2048 encoder
- Installed shaft seal are standard with all motors
- Optional white epoxy food-grade finish

NT Motor 230 V Order Information

Use the information below to create an order code for an NT Motor (top row is an example).

NT Motor Selection Considerations

Feedback Options

Feedback Device Order Code	Feedback Type	Encoder Supply Voltage	SinCos or Incremental Pulses per Revolution	Resolution Available to Position Loop	Feedback Accuracy
-T_NS, -C_NS, -L_NS, -E_NS, -F_NS	Incremental Encoder	5 Vdc	2048	16384 (14 bits)	±600 arc sec.

Motor Selection

Motor Derating

Any adverse operating conditions require that the motor performance be derated. These conditions include ambient temperature above 104 °F (40 °C), motor mounting position, drive switching frequency or a drive oversized for the motor.

Drive Switching Frequency

Most drive current ratings are reduced at higher switching frequencies. See individual drive manuals for details.

Mounting Arrangements

In general, motor torque should be derated if the motor mounting surface is heated from an external source such as a gearbox, the motor is connected to a poor thermal conductor, or the motor is mounted in a confined space with restricted air flow.

Thermal Test Conditions

The performance data shown was recorded with an ambient temperature of 68 °F (20 °C) and the motor mounted on a thermally-isolated aluminum plate.

Motor Model	Frame Size	Mounting Plate Dimensions
NT	2"	6" x 6" x 1/4"
	3"	10" x 10" x 3/8"

NT Motor Holding Brake Specifications

Motor Frame Size (in)	Power Supply (Vdc)	Current (A)	Static Torque (lb-in) (Nm)	Mechanical Release Time (ms)	Mechanical Engagement Time (ms)	Added Inertia (lb-in-sec ²) (kgm ²)
2	24	0.33	20.0 2.26	28.0	14.0	0.000106 0.000012
3	24	0.65	88.5 10.0	43.0	13.0	0.000968 0.000109

Brake Operation

Do not apply the brake while the motor shaft is rotating. The brake can only take a limited number of emergency braking operations and must not be used for repeated dynamic braking.

Thermal Protection

Thermistor protection to 284 °F (140 °C) is built into the motor windings and gives an indication of serious overheating problems. **The installer must connect the thermistor to the drive. Failure to do so will invalidate the motor warranty if winding burns out.**

Environmental Conditions

Any liquids or gases that may come into contact with the motor must be confirmed to ensure compliance with the correct international standards.

Ingress Protection

All NT Motors have shaft seals installed as standard. Standard models have an ingress rating (IP rating) of IP65. Lead configuration "E" models are rated IP67S. Configuration "F" models are rated IP68S.

XV Motor 230 V

Economical Metric AC Servo Motor

The XV Motor is a high performance, low-inertia and high-torque servo motor in a compact economical package – ideal for high-volume applications. UL recognized, CE approved and RoHS compliant, XV Motors offer low-cost solutions with the features of a premium-priced servo offering.

Intended for higher throughputs and smaller machines, XV Motors are available in 4 frame sizes: 40, 60, 80 and 130 mm with speeds ranging from 2000 to 5000 rpm. Applications with continuous torque requirements up to 101 lb-in (11.4 Nm) are the perfect match for XV Motors.

XV Motors with 40, 60 and 80 mm are fitted with AMP (Tyco® Mate-n-Lock™) connectors on 1-ft flying leads. (For added strain relief, these connectors can be snapped into place through holes in panels or brackets.)

Key Features

- Torque range: 0.95 to 101 lb-in (0.1 to 11.4 Nm)
- Speed rating to 5000 rpm
- Four frame sizes: 40, 60, 80 and 130 mm
- UL recognized, CE approved and RoHS
- Ambient operating temperature: 32 to 122 °F (0 to 40 °C)

XV Motor Selection Considerations

XV Motor Feedback – All Frame Sizes

XV Motors include a 5 Vdc incremental encoder with 2048 pulses per revolution.

Motor Selection

Motor Derating

Any adverse operating conditions require that the motor performance be derated. These conditions include ambient temperature above 104 °F (40 °C), motor mounting position, drive switching frequency or a drive oversized for the motor.

Ambient Temperatures

For ambient temperatures above 104 °F (40 °C), the torque must be derated.

Mounting Arrangements

In general, motor torque should be derated if the motor mounting surface is heated from an external source such as a gearbox, the motor is connected to a poor thermal conductor, or the motor is mounted in a confined space with restricted air flow.

Drive Switching Frequency

Most drive current ratings are reduced at higher switching frequencies. See individual drive manuals for details.

Thermal Test Conditions

The performance data shown was recorded with an ambient temperature of 68 °F (20 °C) and the motor mounted on a thermally-isolated aluminum plate.

Motor Frame (mm)	Aluminum Heatsink Plate	
	(in)	(mm)
40	5.91 x 5.91 x 0.24	150 x 150 x 6
60	5.91 x 5.91 x 0.24	150 x 150 x 6
80	9.84 x 9.84 x 0.39	250 x 250 x 10
130	9.84 x 9.84 x 0.39	250 x 250 x 10

Thermal Protection

The XV Motors do not have and are not offered with a winding thermal temperature sensor. Motor feedback cables have the Motor Temperature Sensor lines defeated (shorted between pin 14 (GND) and pin 15 (5 V)). These cables include cable model numbers XUFTS-xxx and XUFCS-xxx (where -xxx is cable length in feet).

All Control Techniques' brand servo drives have a current-limiting algorithm in the firmware specifically to limit current levels. When properly matched and limited to the motor specifications, the drive firmware will fault the drive when the rated rms current of the motor is exceeded.

Environmental Conditions

Any liquids or gases that may come into contact with the motor must be confirmed to ensure compliance with the correct international standards.

Ingress Protection

Standard models have an ingress rating (IP rating) as listed in the table below.

Frame Size	IP rating	Exclusions
40 mm	IP55*	Shaft through area of face plate and connectors
60 mm	IP55*	Shaft through area of face plate and connectors
80 mm	IP65*	Shaft through area of face plate and connectors
130 mm	IP65*	Shaft through area of face plate

NOTE:

* Shaft seal option is not available

Brake Operation

Do not apply the brake while the motor shaft is rotating. The brake can only take a limited number of emergency braking operations and must not be used for repeated dynamic braking.

XV Motor Holding Brake Specifications

Motor Frame Size (mm)	Power Supply (Vdc)	Current (A)	Static Torque		Mechanical Engagement Time (ms)	Added Inertia		Added Weight (kg)
			(lb-in)	(Nm)		(lb-in-sec ²)	(kg·m ² x 10 ⁻³)	
40	24	0.25	2.8	0.318	20	0.000023	0.003	0.2
60	24	0.27	13.0	1.47	50	0.000045	0.048	0.6
80	24	0.38	28.6	3.23	60	0.00011	0.125	0.7
130	24	0.29	70.8	8	40	0.000478	0.54	0.83

NOTES:

- Figures shown in individual motor sections are at 68 °F (20 °C) ambient
- Apply a derate factor of 0.7 to standard brake torque figures if motor temperature is above 212 °F (100 °C)

Cables for Servo Motors

Servo Motor Cables

Cables are a vital part of a servo motor installation. Using Emerson's comprehensive range of high quality cables and connector options, installers can avoid the time and risks involved in manufacturing custom assemblies.

The matched power and feedback cables provide rapid worry-free installation. Control Techniques' brand servo motor-to-drive cables meet EMC standards to ensure a system free from unwanted noise and interference.

Each power cable has drive terminations that make it convenient to connect to the specific drive used.

Cables are available for braked and unbraked motors in standard or flexible duty formats.

4X12SS	—	Cable for 4" and 6" motors, 4-wire 12AWG w/shield; 0.440" (11.2 mm) diameter
4X16SS	—	Cable for 2" and 3" motors, 4-wire, 16 AWG w/shield; 0.380" (9.7 mm) diameter
★4X16SF	—	Flex cable for 2" and 3" motors, 4-wire, 16AWG, w/shield; min. bend radius 5.6"
★4X12SF	—	Flex cable for 4" and 6" motors, 4-wire, 12AWG, w/shield; min. bend radius 9.0"
★4X08SF	—	Flex cable for 8" motors, 4-wire, 8AWG, min. bend radius 9.2" for flexing
PT06A-16-8SSR	—	Motor power connector for 2" and 3" NT motors, female, not IP65, not shielded, flex or non-flex cable
★PT06E-16-8SWSF	—	Motor end power cable, female, w/backshell, IP65, IP65 shielded connector for 2" and 3" motors
★PT01E-16-8PWSF	—	Extension (male) mates with motor end of motor cable; IP65, shielded, for 2" and 3" motors
MS3106A-20-15SSR	—	Motor power connector for 4" and 6" NT motors, female, not IP65, not shielded
★MS3106A-20-15WSF	—	4" motor power connector, female, not IP65 shielded
★MS3101A-20-15PWSF	—	Power cable extension plug for 4" motors, male; mates with motor end of motor cable (not shown above)
PTB-16-8	—	Motor bulkhead connector for 2" and 3" motors
Part Number	Standard Lengths (ft)	Description – Brake Cables and Connectors
CBMS	-005, -015, -025, -050, -100	Molded cable, standard duty, connector at motor only
★CBMF	-005, -015, -025, -050, -100	Flex cable, connector at drive, leads at motor; IP65 shielded connector for 2", 3", 4", 6" motors; min. bend radius 3"
★CBMCS	—	Cable to be connected to bulkhead connector on one end and motor connector on the other end
PT06A-8-3SSR	—	Brake connector kit (not shown above)
PTB-8-3	—	Brake bulkhead connector
BRM-1	—	Brake relay module, 24 V, 1 contract, 6 A, DIN rail mounting

NOTE: Custom lengths available in 5 ft increments

Cable Selection — NT Motors to Drives

Feedback Cable Options: Unidrive M/Unidrive SP/Digitax ST/Epsilon EP — Incremental Encoders

Part Number	Standard Lengths (ft)	Description – Feedback Cables and Connectors
UFCS	-005, -015, -025, -050, -100	Molded cable, connector both ends
MGFS		Standard duty cable for 2" and 3" motors, 8-pair with shield
★MGFF		Flex cable for 2" and 3" motors, 8 pair with shield; min. bend radius 5.6" for flexing, 10 million cycles
CFOCS		Molded extension cable, connects to bulkhead on one end, motor connector on the other end
★CFCF	-005, -015, -025, -050, -100	Flex duty feedback cable for use with PTB-16-23 bulkhead connector, min. bend radius: 5.6" flexing, 10 million cycles
★CFEF	-005, -015, -025, -050, -100	Flex extension cable for encoder feedback motors w/circ. connectors both ends; min. bend radius: 5.6" flexing, 10 million cycles
CFOF	-005, -015, -025, -050, -100	Flex motor feedback cable, connector at motor end only; min. bend radius 5.6" for flexing, 10 million cycles
CFOS	-005, -015, -025, -050, -100	Motor feedback cable, connector at motor only
PT06A-16-23SSR	—	Female connector for motor feedback cable, not IP65, not shielded
PT01E-16-23PWSF	—	Male connector for standard motor feedback cable, use at enclosure end with PTB-16-23, IP65 shielded connector
PTB-16-23	—	Through-the-wall bulkhead connector for feedback cables
★SIBAAX	Lengths are in meters	Incremental feedback cable, connector drive end, high density 15-pin
IM/0063/KI	—	High density 15-pin connector, motor feedback connector on SP,DST, EP
Part Number	Standard Lengths (ft)	Description – Encoder Breakout Board
STI-ENC	—	Epsilon EP drive encoder breakout PCB, push-in terminals
SM-ECT	—	Unidrive M/Unidrive SP/Digitax ST drives encoder breakout PCB, screw terminals

NOTE: Custom lengths available in 5 ft increments

Cable Selection — XV Motors to Drives

XV Motor Cables

Part Number	Standard Lengths (ft)	Description – Feedback Cables and Connectors
XUFCS	-005, -015, -025, -050, -100	XV Motor feedback cable.
XUFTS	-005, -015, -025, -050, -100	XV 40, 60, 80 mm motor to DSUB connector on drive end; 15-pin, high density socket.
XUFTEF	-005, -015, -025, -050	Flex extension feedback cable for XV 40, 60, 80 mm motor frames, connectors on both ends; bend radius: 5.6" flexing
XUFCEF	-005, -015, -025, -050	Flex extension feedback cable for XV 130 mm motor frames, connectors on both ends; bend radius: 5.6" flexing
Part Number	Standard Lengths (ft)	Description – Power Cables
XCMDS	-005, -015, -025	Motor power cable
XTMDS	-005, -015, -025, -050, -100	Motor power cable
Part Number	Standard Lengths (ft)	Description – Power (Flex) Cables
XCMDEF	-005, -015, -025	Flex motor power cable extension. For use with XCMDS; min. bend radius 5.6"
XTMDEF	-005, -015, -025	Flex motor power cable extension. For use with XTMD5; min. bend radius 5.6"
XTBMEF	-005, -015, -025, -050	Flex duty brake cable for XV 40, 60, 80 mm motor frames; TBNS male connector to TBNS female connector; designed as extension of XCMDS cable
XCMD5S	-005, -015, -025, -050	Flex duty brake cable for XV 40, 60, 80 mm motor frames. TBNS male connector to TBNS female connector; designed as extension of XCMDS cable
Part Number	Standard Lengths (ft)	Description – Brake Cables
XTBMS	-005, -015, -025, -050, -100	Motor brake cable, standard duty, connector at motor only
Part Number	Standard Lengths (ft)	Description – Brake (Flex) Cable and Connectors
XCMD5BEF	-005, -015, -025	Flex motor brake cable extension for use with XCMD5S; min. bend radius 5.6"

SERVO MOTOR CABLES

Fan Kits

Unimotor **fm** and **hd** motors (frame sizes 075 to 250) can be field fitted with a cooling fan. These fan kits are intended for use in applications that operate near the thermal limit of the motor. Each Unimotor is thermally protected with an internal winding thermistor. If the motor experiences a thermal trip condition and is found to be operating near the thermal limit, a fan kit may help provide continuous operation during times of high continuous torque output. The motor thermal protection should never be defeated or bypassed as this could cause permanent damage to the motor.

Fan kits are IP20 and include mounting hardware. A terminal box mounted on the top rear of the fan shroud allows connection to the 230 V fan leads.

FAN KITS

Fan Kits

Part Number	Description
075FB21	075 Unimotor fm Motor Fan Box
095FB21	095 Unimotor fm Motor Fan Box
115FB21	115 Unimotor fm and Unimotor hd Motor Fan Box
142FB21	142 Unimotor fm and Unimotor hd Motor Fan Box
190FB21	190 Unimotor fm and Unimotor hd Motor Fan Box
250FB21	250 Unimotor fm Motor Fan Box
