

**External electrical connections**

**Description**

**Transmitter, 4...20mA current output for use with WEKA Visual Level Indicators media temperature ≤ 150°C**

The transmitter is mounted outside of the float chamber opposite to the indication rail (see datasheet 20010501). The magnet inside the float activates the reed switches in the transmitter, depending on the level of liquid in the float chamber, thereby changing the effective value of a resistance network. The resulting voltage output is converted by an internal electronic circuit to a 4...20mA signal. If the liquid level rises above the measuring range of the transmitter (30 mm) the output signal jumps to 115% (ca. 22,5mA) and remains on that limit.

When ordering level indicators with transmitters, hose clamps are included.  
 When ordering transmitters as spare parts, hose clamps are never included and must be ordered separately.  
 In case of ordering hose clamps pipe size must be indicated:

For pipe diameter      30...40mm      Part no.      80648  
 For pipe diameter      40...57mm and 57...80mm      Part no.      84043

**Note**

Please read the instructions in our datasheet 20010501 before performing installation.
